I am a student at The Game Assembly, during my time studying I have, in addition to taking courses, been involved in the creation of 7 games, and developed my specialization work in simulating the physics of fluids.

As a result of this I've developed a good amount of experience in working with various different kinds of people in teams.

As my time at TGA is coming to a close I am now looking to being able to get the opportunity to find a 30 week internship as a game programmer.

Coding Abilities:

- C++ (including some C)
- C#
- Unity
- Html, Css, Javascript
- Java

Education:

TGA (2024-2026)

- My current Education, Specifics are listed in the TGA section.

Stockholm University (2021-2022)

- I completed several courses from the first year of a bachelor's degree in physics.
- Served as a compelling introduction to many more physics concepts, and complicated maths.

Åva (2016 - 2019)

- Upper Secondary school (Gymnasiet) where I took an education focused on the natural sciences.
- Basic foundation in the natural sciences, and maths.

Languages:

Swedish (Native)
English (Fluent)

TGA:

Specialization:

- Explored methods for simulating physical phenomenon.
- Laid out my own plan and had to adapt accordingly to sickness and complications.
- Learned to make use of my experience from learning physics in the context of programming.

Projects 5-7:

- Made use of and contributed to developing an ECS structure.
- Learned to implement Audio through Wwise.
- Developed and polished a visual scripting system in order to allow Level designers and others to create gameplay.

Projects 3-4:

- Learned to implement audio using FMOD.
- Created a robust collision system which could handle sloped surfaces, really thin platforms, and high velocities.

Projects 1-2:

- Introduction to working in groups and general programming.
- Provided some basic but structured knowledge on how to use Unity and C#.
